

# DZF SERIES

## DC MOTOR

## FEATURES AND USES

DZF Series DC motor are new developed products of our factory. The products are found wide use for prime mover in various machinery, such as mill auxiliary in metallurgical industry, metal cutting machine-tool, paper-making, print, textile, printing and dyeing, cement-making, plastic extruding machine etc.

Outline mounting dimensions of the motors comply with IEC 72 Standard, except for the axial distance between the mounting holes(dimension B).

Performances and technical require-ments of the motors can be checked in accordance with IEC 34-1 Standard of the international Electrotechnical Commis-sion,or DIN 57530 Norm of the Deutsche Industrie-Norm.

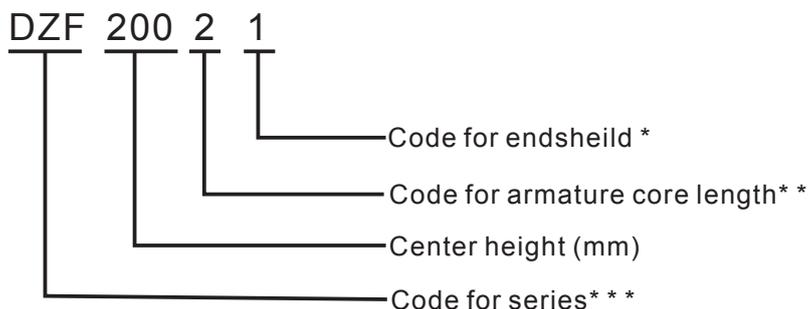

The angular shape of the machine makes good use of space.The motors have laminated yokes, which means than when used on rectifier power supplies they can endure both current ripple and rapid current changes(load change) urder dynamic condition. The stator design leads to high accuracy of pole spacing and consequent good communication.

Motors are class F insulated. with reliable insulating construction and impregnating process, ensuring stable dielectric performance and excellent heat dissipation.

The motors possess the features of small size, good performance, light weight, large output, high efficiency and reliability, being able to match the current international advanced level.

The motors can be lastingly operated from fully controlled three phase bridge without a smoothing reactor. Motors for 160V may be operated on single phase bridge thyristor. In that case,a smoothing reactor, whose inductance is specified in

## TYPE DESIGNATION

\* The digit 1,2 for short, and long endshield.  
 \*\* As regards frame size DZF-112, the first digit means No. of poles, the second digit for core length.  
 \*\*\* The letter "Z"for d-c machine, the gigit "F"for ordinal number of the fourth series design.

## DZF SERIES DC MOTOR

### Electrical Performance

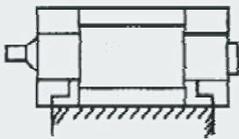

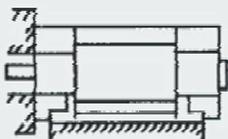

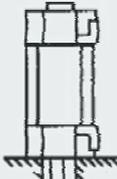

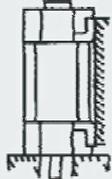

1. Data listed in the technical data sheet should be employed under the following conditions;
  - a. Altitude above sea level maximal 1,000m;
  - b. Cooling air temperature maximal 40°;
  - c. Ambient conditions for motors should be free from acidic, alkali fumes or other aggressive gases which corrode insulation;
  - d. Duty: Continuous(S1);
  - e. Armature and field circuit for motors may be either operated on staticthyristor controlled supplies, or from d-c generator;
  - f. Performances of motors all comply with State Standard GB/T755<<Fundamental technical rules for electrical machines>>.
  
2. Nominal rated voltage: 160V or 440V, Values for 220V or 400V or other voltage may be derived on request.
  
3. Rated speed: 3000, 1500, 1000, 750, 600, 500, 400, 300 and 200r/min. Total nine grades. Decrease armature voltage to make speed regulating under constant torque, lowering down field voltage to make speed regulating at constant output. Speed regulating range: see technical data.  
 The given multiple of load to rated load of different speed regulating range: see technical data. The given multiple of load to rated load of different speed range see Appendix 1.  
 The torque can be remained constant by reducing speed via armature voltage weakening below rated value. It is stipulated that armature speed range down to maximal 20r/min at constant torque and stable running.
  
4. Nominal field voltage: 180V. Other excitation voltage are also acceptable on request. Forced excitation is allowed with the voltage of less than 500V. When a motor is normally running, its excitation current must not be higher than the rated excitation current.  
 To assure the reliability of insulation of excitation system, the motor must be protected against self-induced voltages by a release resistor connected in parallel with the field winding when the excitation circuit of the motor is interrupted. At rated field voltage the value of shunt resistor is about seven times field winding resistance(cold). While the field voltage is higher than nominal voltage, the value of shunt resistance may be lower than seven times field resistance, otherwise higher than seven times.
  
5. Four frame size DZF-315, DZF-355, DZF-400, DZF-450 compensating windings are provided. For frame size Z4-250 and DZF-280 the motors are feasible with a compensating winding too.
  
6. A marked earthing terminal is provided for the motors.
  
7. The efficiencies listed in the data sheet are for rated output, voltage and speed, and include excitation losses, excluding separate ventilating fans.

## CONSTRUCTION

1. Protection, mounting and type of construction:

a. Type of protection of the whole series: IP21S

b. Mounting modes comply with the State Standard GB/T997 stipulated as follows:

Mounting Type				
	IMB-3	IMB-5	IMV-1	IMV-15
For Use in	Z4-100-Z4-450	Z4-100-Z4-315	Z4-100-Z4-315 The machine are always delivered with feet,even when they are fiang-mounted	Z4-100-Z4-315

2.Methode of Cooling:

Modes of cooling for all teh motors are separate cooling, force ventilated. Cooling by frame radially fan, and attached an air filter.

Modes of cooling for motors may be made into three types, namely IC-06, IC-17 and IC-37.

a. For DZF-100~DZF-160, the blower is mounted on the non-drive side.

b. For DZF-180~DZF-450, the blower is mounted on the drive side.

c. The required cooling air volume, air pressure and fan motor capacity are shown below.

Table 1

Frame Size	Air Volume	Static Pressure	*Motor Output
	m <sup>3</sup> /h	Pa	kW
DZF-100	160	200	0.04
DZF-112	220	300	0.06
DZF-132	360	450	0.18
DZF-160	790	600	0.37
DZF-180	1200	940	1.1
DZF-200	1600	800	1.1
DZF-225	2880	1400	3.0
DZF-250	3000	1400	3.0
DZF-280	4000	1600	4.0
DZF-315	4680	1600	5.5
DZF-355	5200	1600	5.5
DZF-400	7200	1800	5.5
DZF-450	9000	1800	7.5

\* All the ventilating fan motors are of three phase, twopole, 380V.

Motors with the following five methods of cooling can be also ordered, but prior consultations are needed.

- a. Frame size 100 up to 180 may be made into the totally enclosed, frame cooled motor(IC410);
- b. Frame size 160 up to 250 may be made into the separately ventilated motor with blower mounted on its non-drive side(IC05);
- c. Frame size 100 up to 160 may be made into the self cooled open motor with its own fan mounted on the shaft (IC01).
- d. Frame size 160 up to 315 may be made into totally enclosed motor with internal cooling air circulation by independent air-air heat exchanger mounted on it (IC666);
- e. Frame size 160 up to 450 may be made into totally enclosed motor with independent air-water heat exchanger mounted on it (IC86w).

3. Standard terminal box mounting is on the right hand side seen from the drive end of the motor. As an alternative, mounting at the top or on the left-hand side is possible on request.

4. Motors, if need be, can be fitted a tachogenerator or other accessories at the non-drive end.

5. Motors, when directly coupled, must use elastic or flexible couplings. The drive and driven shafts must be aligned with the utmost care.

Radial forces acting on the shaft extensions (belt or pinion drive) must not exceed the values given in the diagrams on the following pages (see Appendix 2).

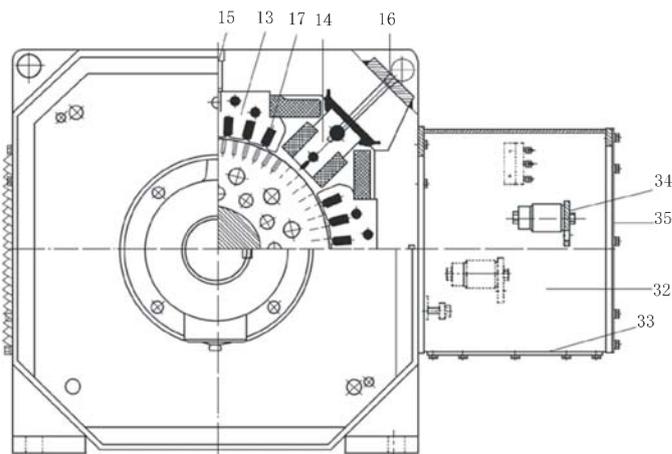

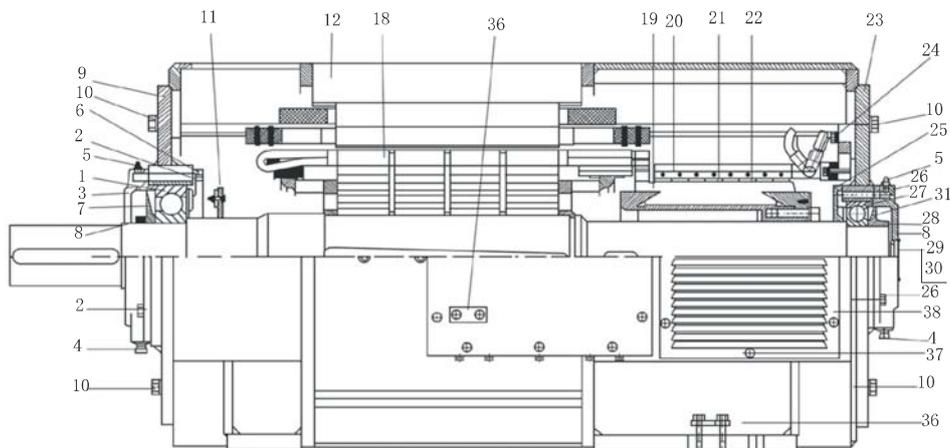

Motors are of compact structure, elegant appearance, spacious terminal box, easier wiring, servicing and maintenance.

#### **Remarks:**

The ratings, output and speed range through field weakening etc. listed below are merely for reference. For purposes of incessantly adopting up-to-date technology, the data listed in the following table are subject to relevant change.

## **Notice on order**

1. Please refer to our catalogue before ordering. If the types, ratings you need are not covered by our booklet please contact us. Should you have particular needs, please offer us specific proposal in advance. A contract or pilot production agreement may be made when the requirements are fixed by common consent.
2. Please write clearly the type, output, voltage, speed, duty, type of construction, excitation, field voltage, No. of shaft end, location of terminal box, necessary accessories and spare parts etc.
3. If the humid-tropical type required, please mark "TH" behind the original type number.

Illustration (Appendix 1)

1. Multiple of load implies the multiple of armature current (armature circuit characteristic factor).
2. The figures beside the curves in the drawing are the rated speed of motors.
3. The multiple of load under speed regulation via field weakening for frame size DZF-160 and below may
